Between the rich regions of Georgia, with unique and varied nature, abundant resource potential, Samegrelo is one of the most distinguished places. Therefore, the detailed study of this region, its natural-resource potential, and the realization of results in practice is one of the main objectives of the state.

The paper deals with the natural conditions of the Samegrelo region (geological structure, relief, climate, hydropography, soil, vegetation, animal world, landscapes). The potential for climate-warming, water, wind and solar energy, resort-recreational, agro and soil-climatic, hydrological and forest resources is also estimated. The key issues discussed in the report are directly related to the sustainable development of economy, agriculture, construction, transport, energy, resort and general area.
